

MOHIT SINGH CHAHAR

8279365568 | singhmohit150207@gmail.com | LinkedIn | GitHub | Chennai, India

EDUCATION

SRM Institute of Science and Technology (SRMIST)

B.Tech in Computer Science and Engineering

- CGPA: 8.7/10

2024 – 2028

Chennai, India

PM SHRI Kendriya Vidyalaya

Senior Secondary (CBSE)

- 83.4%

2023 – 2024

Agra, India

PM SHRI Kendriya Vidyalaya

Secondary (CBSE)

- 80.4%

2021 – 2022

Agra, India

EXPERIENCE

Cybersecurity & Ethical Hacking Intern

Tamizhan Skills (RISE Program)

Mar 2026 – Mar 2026

Remote (India)

- Executed vulnerability assessments on simulated network environments using Nmap and Burp Suite, identifying 3+ critical security misconfigurations.
- Analyzed network traffic using Wireshark to detect anomalous patterns, successfully isolating potential security threats in a controlled environment.
- Applied industry-standard ethical hacking frameworks to simulate real-world attack vectors, strengthening defensive posture against common exploits.

Python Full Stack Developer Intern

EduSkills Academy | AICTE Virtual Internship

April 2026 – June 2026

Remote (India)

- Engineered a full-stack e-commerce platform, integrating secure REST APIs with a React frontend to deliver a production-ready prototype within an 8-week sprint.
- Developed scalable REST APIs using FastAPI, enforcing data integrity through Pydantic schemas to reduce input validation errors.
- Architected responsive frontend components in React, streamlining user experience and optimizing data flow between client and server.
- Implemented secure authentication and state management, successfully deploying a full-stack capstone project that demonstrated end-to-end system integration.

PROJECTS

VulnShop | Intentionally Vulnerable E-Commerce Platform | Python, Flask, MySQL, HTML, CSS, JavaScript, Jinja2, Git

- Engineered an intentionally vulnerable e-commerce platform to demonstrate OWASP Top 10 risks, enabling security testing for 5+ common attack vectors including SQLi and XSS.
- Implemented authentication, user profiles, product search, and dashboard modules to simulate a real-world web application.
- Integrated multiple intentionally insecure features, including SQL Injection, Cross-Site Scripting (XSS), Weak Authentication, and Insecure Password Hashing (MD5) for ethical security testing.
- Designed a responsive user interface with reusable templates and interactive dashboards using HTML, CSS, and Jinja2.

VendorMart | Full Stack E-Commerce Platform | Python, Flask/FastAPI, MySQL, HTML, CSS, JavaScript, Git

- Engineered a scalable multi-vendor e-commerce platform, implementing secure JWT-based authentication and role-based access control (RBAC) to manage distinct vendor and customer permissions.
- Architected a normalized MySQL schema to handle complex vendor-product relationships, reducing query latency by 20% through optimized indexing for high-volume product searches.
- Integrated a dynamic frontend with RESTful backend services to enable real-time product search and comparison, improving user navigation efficiency.
- Hardened application security by implementing salted password hashing (Bcrypt), rigorous input validation, and parameterized queries to mitigate OWASP Top 10 vulnerabilities like SQL injection.

TECHNICAL SKILLS

Languages: C, C++, Java, JavaScript, Python

Developer Tools: Git, GitHub, VS Code, Linux, Burp Suite, Nmap

Web Development: HTML5, CSS3, Flask, Jinja2, REST APIs

Databases: MySQL, MongoDB, SQLAlchemy

Core Concepts: Data Structures & Algorithms (DSA), Object-Oriented Programming (OOP), DBMS, Operating Systems, Computer Networks, Cryptography and Network Security (CNS)
